

NEO 3

Installation loudspeaker

NEO 3 is an ultra-compact loudspeaker directly inspired by the first models of the NEO series. It features a high performing driver which makes possible the reproduction of a wide range of frequencies.

NEO 3 specially stands out because it is possible to use the same model in either 100 V Line or 8 Ω installations. When the loudspeaker is connected to low impedance, audio doesn't go through the transformer, in order to maintain a high quality level.

NEO 3 is very quick and simple to install, thanks to its new bracket specially designed for this model. This new bracket also makes possible to orientate the speaker in both axis very quickly.

Features

- Ultra-compact loudspeaker.
- Elegant shape and minimalist design for an easy integration in any installation.
- Suitable with 70/100 V Line and low impedance (8 Ω) installations.
- High performing driver which allows the reproduction of a wide range of frequencies.
